MDB Calibration Technician Training

Module Register / Master Index

Workspace 006-B Calibration Technician Training Lane

Document Type	Training register, module index, and package assembly control sheet
Version	v0.1
Status	Active internal training index
Training Lane	Workspace 006-B Calibration Technician Training
Controlled Modules	Modules 001-010
Purpose	Tie all calibration technician training modules together into a single controlled roadmap before Adobe/PDF package assembly.

1. Purpose of this index

This index is not another training module. It is the control document for the Mobile Drill calibration technician training lane. It identifies the active modules, their versions, their purpose, the required completion path, and the recommended order for combining the PDFs into one training package.

Use this index as the first document in the combined Adobe package so a trainee, senior calibration tech, or internal reviewer can quickly understand what the program contains and how the pieces fit together.

2. Program scope

The calibration technician training lane prepares a trainee to understand the SPT analyzer kit, instrumented rods, SPT/N60 context, field setup, software workflow, LP/LE/depth documentation, data-quality troubleshooting, report handoff, customer communication, supervised progression, and final practical evaluation.

The training lane is designed for internal Mobile Drill use and supports Workspace 006 Calibration Workspace and Workspace 008 Reference & Training.

3. Active module register

Module	Title	Version	Status	Controls / Purpose
001	Role, Purpose, and Workflow Overview	v0.3	Active	Introduces the calibration service, technician role, job flow, boundaries, and why calibration matters.
002	SPT Analyzer Kit, Instrumented Rods, and Job Readiness	v0.2	Active	Covers the analyzer kit, instrumented rods, sensors, connectors, PPE, job materials, and readiness checks.
003	SPT Fundamentals, N-Value, and N60	v0.2	Active	Explains SPT basics, N-values, N60, ASTM context, refusal, and plain-language customer explanation.
004	Field Setup and SPT Analyzer Software Workflow	v0.1	Active	Controls field setup, software navigation, data file setup, pulse check,

Module	Title	Version	Status	Controls / Purpose
				first-blow observation, and test closeout.
005	LP, LE, Depth Intervals, and Field Measurement Accuracy	v0.1	Active	Controls LP, LE, depth interval accuracy, 18/24 inch intervals, 6-inch blow counts, and measurement documentation.
006	Data Quality, Refusal, Sensor Issues, and Troubleshooting Boundaries	v0.1	Active	Covers bad data, refusal, failed pulse checks, sensor issues, accelerometer/strain gauge response, and escalation boundaries.
007	Report Handoff, Field Closeout, and Customer Relationship Notes	v0.1	Active	Covers USB/email/office data handoff, calibration log, field notes, photos/video, report package awareness, and relationship closeout.
008	Customer Communication and Do-Not-Promise Rules	v0.1	Active	Teaches approved language, report and pricing boundaries, customer-pressure responses, jobsite marketing, and do-not-promise rules.
009	Training Progress, Supervised Runs, and Solo Service Approval	v0.1	Active	Defines observed appointments, supervised lead appointments, report-building progression, progress tracking, and solo service approval.
010	Practical Field Evaluation / Final Scenario Test	v0.1	Active	Final scenario-based practical evaluation before approved solo service appointments and PDI certification requirement.

4. Required completion path

The recommended training path is:

1. Complete Modules 001-008 and associated knowledge checks.
2. Complete minimum 5 observed / work-with calibration appointments, with additional observations if comprehension requires.
3. Complete comprehension check before supervised lead work.
4. Complete minimum 5 supervised lead appointments where the trainee does all work while the senior calibration tech observes.
5. Observe the senior calibration tech build a minimum of 5 reports.
6. Complete 4 historical report run-throughs to compare trainee results against original reports.
7. Build reports from trainee-collected data under senior calibration tech review until performance is acceptable.
8. Complete Module 010 practical field evaluation / final scenario test.
9. Obtain PDI onsite training certification before solo service appointments.
10. Receive final approval: Approved for solo service appointments.

5. Training approval gates

Training Gate	Minimum / Standard	Control Note
Modules 001-008	Complete before final approval path	Module completion proves exposure; field performance proves readiness.

Training Gate	Minimum / Standard	Control Note
Knowledge checks	Pass module quizzes; review critical misses	Critical safety/data-quality gaps must be corrected even if quiz score is passing.
Observed / work-with appointments	Minimum 5; more if comprehension requires	Trainee watches and learns what good field work looks like.
Supervised lead appointments	Minimum 5 after comprehension check	Trainee does all work while senior calibration tech observes.
Observed report builds	Minimum 5	Trainee observes how collected data becomes a report.
Historical report run-throughs	Minimum 4	Trainee compares their results against original reports.
Trainee-built reports	Undetermined minimum	Senior calibration tech watches trainee build reports from trainee-collected data until acceptable.
Module 010 final evaluation	Pass/fail by scenario with retraining/retest triggers	Confirms real-world readiness, not classroom perfection.
PDI onsite certification	Required before solo service appointments	Final external certification requirement.
Solo service approval	Approved for solo service appointments	Applies to standard service appointments.
High-priority eligibility	Separate senior calibration tech decision	Not automatic after solo approval; based on proven performance over time.

6. Program-wide control rules

- Module completion does not equal approval for solo service appointments.
- The senior calibration tech controls training progression and approval decisions.
- Data quality controls report quality; the report builder should not have to guess what happened in the field.
- The instrumented rod must be protected from entering the hollow stem auger or borehole.
- LP, LE, depth intervals, and 6-inch blow counts must be measured and documented accurately.
- Bad data must be investigated and documented; it must not be ignored or treated as clean data.
- Refusal and rapid advancement must be recognized and documented.
- Questionable data, unresolved sensor issues, suspected strain gauge damage, mechanical issues, or customer-pressure issues must be escalated.
- Final report delivery is handled through a qualified report handler.
- The approved customer explanation is: “We are checking how much hammer energy is actually getting into the drill rods so your SPT blow counts can be corrected to the N60 standard and used with confidence.”
- Pricing, discounts, and scheduling-level commitments are not handled by the field tech.
- High-priority job eligibility is not automatic after solo approval and remains a separate senior calibration tech decision.

7. Source basis

This training lane was built from the following source families and SME inputs:

- KC014 automatic hammer source logic
- KC015 calibration service-line source logic
- Calibration Service Module Extraction Worksheet
- SPT Introduction Draft
- Chapter 2 - How SPT Hammer Energy Affects N-Values
- Calibration Data Collection Cheat Sheet
- Workspace 006 Calibration Workspace rules and training-progress structure
- Workspace 008 Reference & Training routing logic
- SME corrections from Mobile Drill internal calibration workflow, report building, field practice, and customer communication standards

8. Training boundaries

This training lane prepares a technician to perform standard calibration service appointments and understand the report workflow. It does not make the technician a final report authority, pricing authority, scheduling authority, engineering authority, or high-priority job authority by default.

The final step before solo service appointments is PDI onsite training certification. The internal Mobile Drill training program is intended to prepare the technician to enter that PDI training with confidence and understand the field meaning behind the analyzer, sensors, data collection, and report workflow.

9. Adobe/PDF package assembly order

When combining the PDFs in Adobe, place this index first, then Modules 001-010 in numerical order.

Combine Order	PDF File
00	MDB_Calibration_Tech_Training_Module_Register_Master_Index_v0.1.pdf
01	MDB_Calibration_Tech_Training_Module_001_v0.3_SME_Cleanup.pdf
02	MDB_Calibration_Tech_Training_Module_002_v0.2_SPT_Analyzer_Kit_Job_Readiness.pdf
03	MDB_Calibration_Tech_Training_Module_003_v0.2_SPT_Fundamentals_N_Value_N60.pdf
04	MDB_Calibration_Tech_Training_Module_004_v0.1_Field_Setup_SPT_Analyzer_Software_Workflow.pdf
05	MDB_Calibration_Tech_Training_Module_005_v0.1_LP_LE_Depth_Intervals_Field_Measurement_Accuracy.pdf
06	MDB_Calibration_Tech_Training_Module_006_v0.1_Data_Quality_Refusal_Sensor_Issues_Troubleshooting_Boundaries.pdf
07	MDB_Calibration_Tech_Training_Module_007_v0.1_Report_Handoff_Field_Closeout_Customer_Relationship_Notes.pdf
08	MDB_Calibration_Tech_Training_Module_008_v0.1_Customer_Communication_Do_Not_Promise_Rules.pdf
09	MDB_Calibration_Tech_Training_Module_009_v0.1_Training_Progress_Supervised_Runs_Solo_Service_Approval.pdf
10	MDB_Calibration_Tech_Training_Module_010_v0.1_Practical_Field_Evaluation_Final_Scenario_Test.pdf

10. Revision and change-control notes

Use this register to track the active version of each module. If a module is revised, update this index so the combined PDF package does not mix stale and active versions.

- Do not replace a module in the combined package without updating this register.
- If field procedure changes, revise the controlling module and update the version number here.
- If PDI training requirements change, update Module 010 and this register.
- If Mobile Drill changes report delivery, report handler, or customer-communication rules, update Modules 007-008 and this register.
- If training counts or approval gates change, update Module 009 and this register.

11. Revision history

Version	Date	Status	Notes
v0.1	2026-07-22	Active	Initial master index for Modules 001-010 calibration technician training lane.

Completion note: This index completes the first controlled calibration technician training package for Modules 001-010. Place it at the front of the combined PDF package.
